

The Corona And Twin Peaks Mercury Mine Remediation Project

Sediments entering Lake Berryessa after storm.

*Abandoned Mercury Ore Processing equipment
in Napa County*

The Institute for Conservation Advocacy, Research and Education (ICARE)

Speaker:

Stephen McCord, President of McCord Environment

Nearly buried in the sands of time, the Inner Coast Range's mercury mining legacy continues to haunt us with scarred landscapes, dangerous mine shafts, and contaminated streams and lakes. In this presentation, Dr. Stephen McCord will describe the scale of the problem today in Napa County, but also share about current activities to monitor conditions, outreach to affected people and clean up contaminated sites.

Stephen McCord is President of McCord Environmental. He has over 20 years of consulting, research and teaching experience addressing water quality concerns throughout California and on four continents. A particular area of focus has been mercury contamination - tracking pollution from sources to impacts, restoring abandoned mine sites, strategic planning, and facilitating stakeholder groups.

Wednesday, Dec 7th 2016
6:30-7:30pm
Napa Valley College (Little
Theater),
2277 Napa Valley Highway,
Napa, Ca. 94558
